Open Position: Data Engineer Intern

Company Overview:

REsurety is a venture-backed FinTech startup that is eliminating the challenge of resource intermittency for the wind power industry. We are revenue-positive, have active customers, and work in partnership with some of the world's leading risk market players. Our team keeps an informal office with open lines of communication, little hierarchy, and a rapid pace. If putting your skills to work to drive down the cost of renewable energy by solving the challenge of resource intermittency sounds exciting, then we would love to receive your application.

Position Overview:

As a data intern on the Engineering team, you will help us advance our current data architecture to the next level by supporting the backend development, exploring new technologies, and writing flawless code.

Key Responsibilities:

- Create and maintain relational and non-relational databases
- Write code in R to communicate our analytical engine with multiple data sources
- Deploy cloud technology solutions (e.g., Azure, Rackspace), preferably with AWS

Required Qualifications:

- 1+ years of experience that is directly related to the key responsibilities above
- Experience with the R language (secondary preference for MATLAB/Python)
- Experience with Linux systems, bash command line, and basic knowledge of networking
- Experience with ETL applications
- Major in computer science, electrical engineering, or a related field

Preferred Qualifications:

- A passion for driving down the cost of energy from renewable sources
- Self-motivated and detail-oriented: capable of executing software development with little oversight
- Applied experience and demonstrated success in wind energy and/or power markets

Details:

- Location: Boston, MA
- Minimal travel required
- Part time: ~20 hours per week (flexible)
- Duration: 10+ weeks

Interested applicants should send a cover letter and resume to Christian Rivero: crivero@resurety.com.
