## Open Position: Engineering Software Intern

### Company Overview:

REsurety is a venture-backed FinTech startup that is eliminating the challenge of resource intermittency for the wind power industry. We are revenue-positive, have active customers, and work in partnership with some of the world's leading risk market players. Our team keeps an informal office with open lines of communication, little hierarchy, and a rapid pace. If putting your skills to work to drive down the cost of renewable energy by solving the challenge of resource intermittency sounds exciting, then we would love to receive your application.

### Position Overview:

As an intern on the Engineering team, you will help us advance our analytical capabilities through advanced modeling, efficient software architecture, and high-quality implementation.

### Key Responsibilities:

- Support the analysis and quality control of REsurety's weather risk assessment engine
- Continue the advancement of REsurety's data analytics and visualization capabilities

### Required Qualifications:

- Experience with the R language (secondary preference for MATLAB/Python)
- Knowledge of modeling, simulation, or data science
- Major in computer science, engineering, statistics, applied math, geoscience, or a related field

### Preferred Qualifications:

- A passion for driving down the cost of energy from renewable sources
- Self-motivated and detail-oriented: capable of executing software development with little oversight
- Applied experience and demonstrated success in wind energy and/or power markets

### Details

- Location: Boston, MA
- Minimal travel required
- Part time: 20 hours per week
- Duration: 10+ weeks

Interested applicants should send a cover letter and resume to Karl Critz, CTO: [kcritz@resurety.com](mailto:kcritz@resurety.com).
