

# REsurety is a mission-driven organization dedicated to accelerating the world's transition to a zero-carbon future.

We provide software and services to support both the financial and sustainability goals of clean energy buyers, sellers, and investors. Our software offers data-driven insights at various stages of the project lifecycle from initial exploration to portfolio management. Our services leverage our domain expertise and deliver solutions tailored to the unique needs of our customers.

The REsurety team consists of meteorologists, renewable energy and power market experts, software engineers

and more who have collectively built the REsurety platform for the full spectrum of clean energy customers. Regardless of each customer's specific priorities, REsurety is able to help buyers or their advisors, as well as their clean energy suppliers, identify the best projects to suit their needs leveraging our platform or a more bespoke advisory engagement.

## The REsurety Platform

**The REsurety platform is an integrated suite of clean energy software solutions that addresses the specific needs of our clean energy customers: buyers, sellers, and investors. The platform is built on the input and feedback of those stakeholders and offers end-to-end workflow support. The platform includes Project and Carbon Explorer, Project Evaluator, and Portfolio Tracker.**

### Project Explorer

In Project Explorer you can view historical price and generation data for any project up to 20 years into the past or 20 years into the future. Historical data can even be modeled to pre-date a project's commission date to simulate a longer backcast of project performance. Forecasted power prices and generation are available across a range of power market conditions and weather scenarios to get a realistic range of possible future outcomes.

### Carbon Explorer

Carbon Explorer offers the ability to view and analyze historical and forecasted LME data for operational wind and solar projects in ERCOT, PJM, CAISO, MISO, SPP, NYISO, and ISONE. You can quickly access high-quality carbon emissions data paired with generation at the monthly and hourly level.

## Project Evaluator

Project Evaluator is a simulation tool for forecasting and backcasting wind and solar project and PPA performance. With the tool, users can rank power purchase agreement RFP results or submissions based on expected financial value and risk, emissions impact, carbon free energy metrics, among others. For renewable projects and contracts, you can forecast project generation and offtake settlements.

## Portfolio Tracker

With Portfolio Tracker, you can analyze and audit how your contracts are performing and what risks they hold; evaluate how settlement is expected to occur over the coming months and years; and measure project-specific financial performance and carbon emissions performance. Perhaps most importantly, with Portfolio Tracker, you can confidently explain financial and environmental outcomes to your stakeholders.

# Risk Management

## Transaction Services

REsurety provides settlement calculation, valuation and compliance reporting, and origination services including:

### Calculation

Calculation of settlement payments, including separation of operational and weather-driven gains and losses.

### Valuation & Reporting

Automated, dynamic forward valuation of contracts for accounting and compliance purposes. Reporting of creation and continuation data for compliance.

### Origination

Hedge origination and structuring for clean energy buyers and sellers.

## Advisory Services

Our advisory services are unique to each customer and include:

Asset value, forecasting and risk assessment.

Portfolio optimization and hedging strategy.

Contract performance auditing.

Locational Marginal Emissions (LMEs) reports.
