

Empowering the Future of Energy with Software, Services, and Marketplace Solutions

REsurety is the leading provider of data, software, and services to the clean energy economy, and operates the only transactional marketplace for clean power. Trusted by the industry's leading buyers, sellers, and investors, REsurety's proprietary data models, powerful technology platforms, and deep domain expertise empower confident, impactful decision-making and efficient, effective portfolio management.

CleanTrade

The Only Marketplace to Buy, Sell, and Trade Clean Energy

CleanTrade is the only transaction platform for clean energy, providing critical liquidity to project-specific vPPAs, PPAs, and RECs. In addition to enabling fast executions through end-to-end workflows, CleanTrade

provides unprecedented visibility into market pricing and terms, as well as deep insight into project and contract-specific financial and environmental metrics.

CleanSight

Powering Better Decisions with Unrivaled Clean Energy Intelligence

CleanSight is an integrated suite of clean energy software solutions that addresses the specific needs of our clean energy customers: buyers, sellers, and investors. The platform is built on the input and feedback of those stakeholders and offers end-to-end workflow support. The platform comprises four components: Discover, Impact, Simulate, and Manage.

Discover

In *Discover* you can view historical price and generation data for any project up to 20 years into the past or 20 years into the future. Historical data can even be modeled

to pre-date a project's commission date to simulate a longer back-cast of project performance. Forecasted power prices and generation are available across a range of power market conditions and weather scenarios to get a realistic range of possible future outcomes.

Impact

Impact offers the ability to view and analyze historical and forecasted LME data for operational wind and solar projects in all seven U.S. ISOs. You can quickly access high-quality carbon emissions data paired with generation at the monthly and hourly level.

Simulate

Simulate is a tool for forecasting and backcasting wind and solar project and PPA performance. With the tool, users can rank power purchase agreement RFP results or submissions based on expected financial value and risk, emissions impact, carbon free energy metrics, among others. For renewable projects and contracts, you can forecast project generation and offtake settlements.

Manage

With *Manage*, you can analyze and audit how your contracts are performing and what risks they hold; evaluate how settlement is expected to occur over the coming months and years; and measure project-specific financial performance and carbon emissions performance. Perhaps most importantly, with *Manage*, you can confidently explain financial and environmental outcomes to your stakeholders.

Risk Management

Transaction Services

REsurety provides calculation, valuation and compliance reporting, and origination services including:

Calculation

Calculation of settlement payments, including separation of operational and weather-driven gains and losses.

Valuation & Reporting

Automated, dynamic forward valuation of contracts for accounting and compliance purposes. Reporting of creation and continuation data for compliance.

Origination

Hedge origination and structuring for clean energy buyers and sellers.

Advisory Services

Our advisory services are unique to each customer and include:

Asset value, forecasting and risk assessment.

Portfolio optimization and hedging strategy.

Contract performance auditing.

Locational Marginal Emissions (LME) reports.
